

Hi, and welcome to our tutorial for rotating and resizing a picture with Picresize. Let's get started.

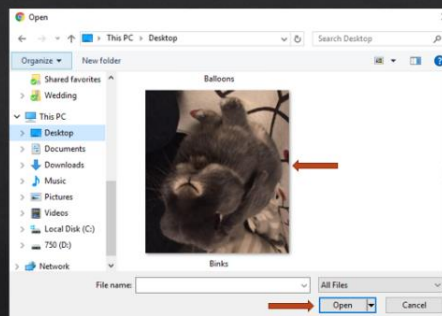

Rotate and resize a picture with

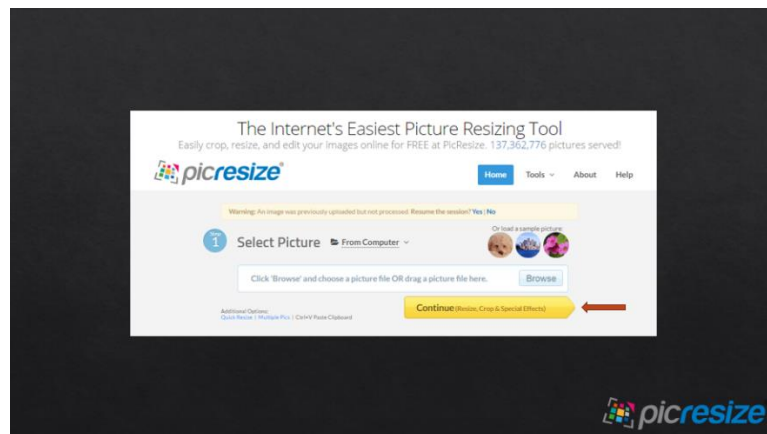

Click **Browse** to find a picture on your computer.

A dialog box will open and you can select the picture you want to use. Click on the picture, and click **Open**. For this tutorial, we'll be using a picture of my pet rabbit, Mr. Binks.

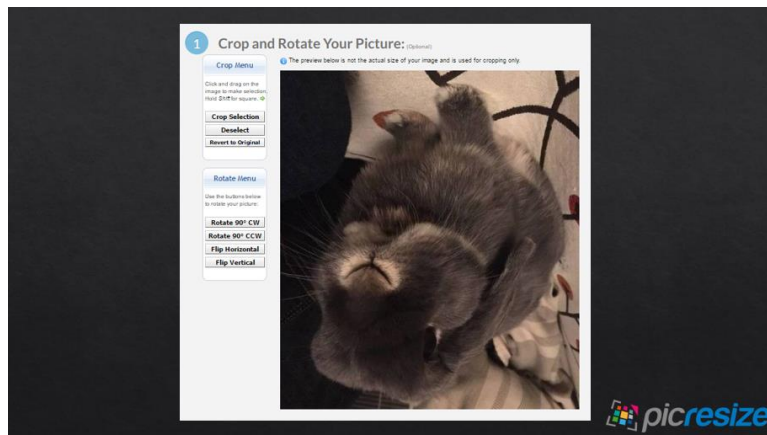

Once your picture has been added, click **Continue**.

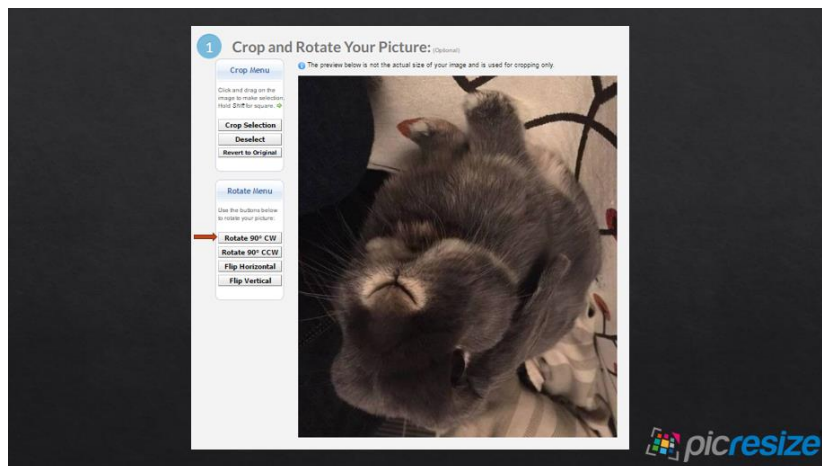

Once the webpage loads, you'll see the picture of Mr. Binks.

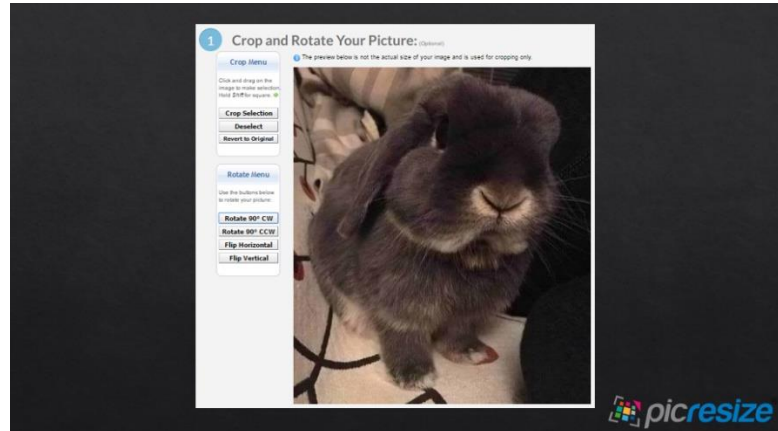

As you can see, this picture is not oriented the way we want. We want to rotate his picture so his head is at the top of the picture.

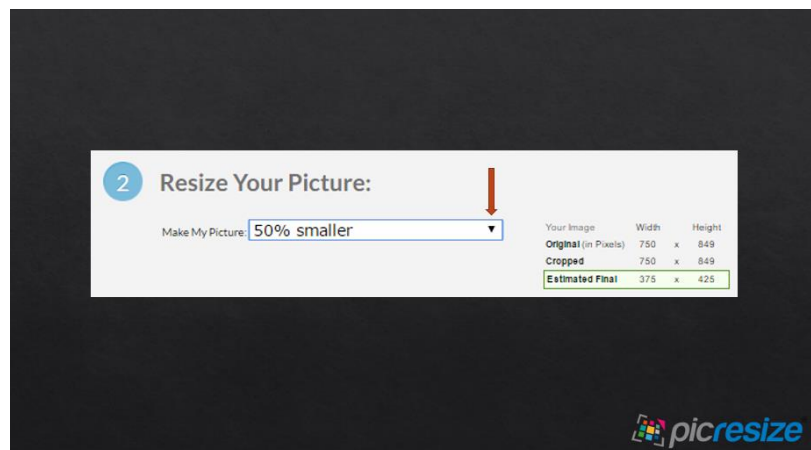

To rotate Mr. Binks' photo so that his ears point down, we need to click **Rotate 90° CW** until his picture is oriented the way we want.

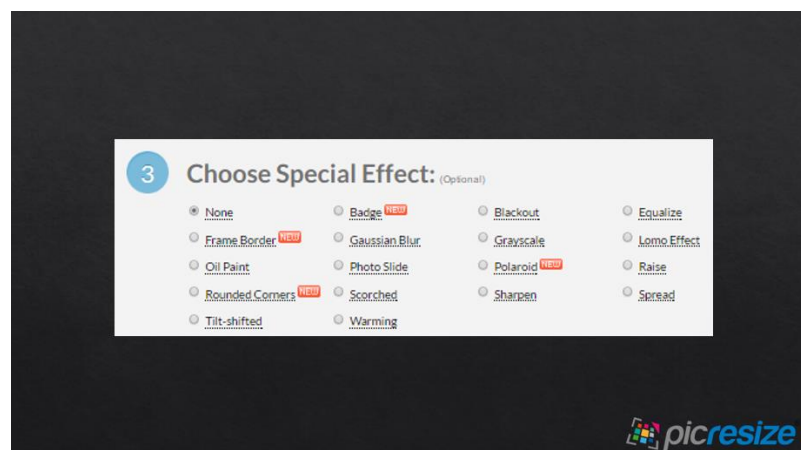

Now that we've clicked **Rotate 90° CW** twice, Mr. Binks' photo looks just the way we want it!

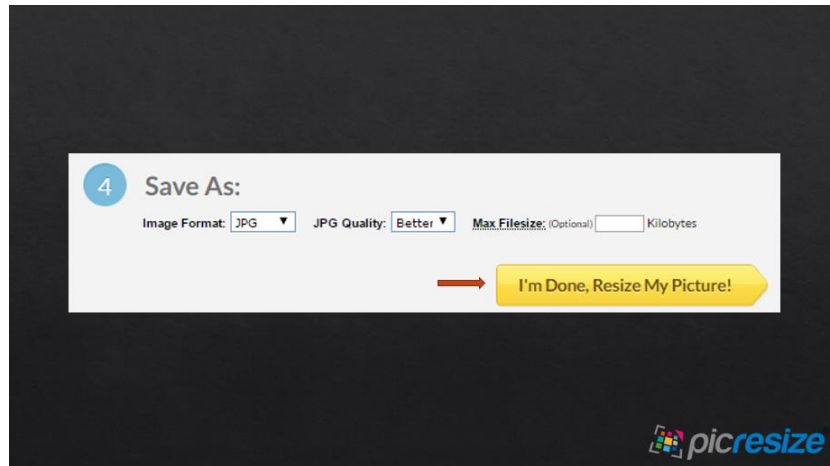

His picture is still pretty big, though. We want to resize it to 50% of the picture's original size. To do so, under the **Resize Your Picture** section, use the dropdown menu to choose a size you want the image to change to.

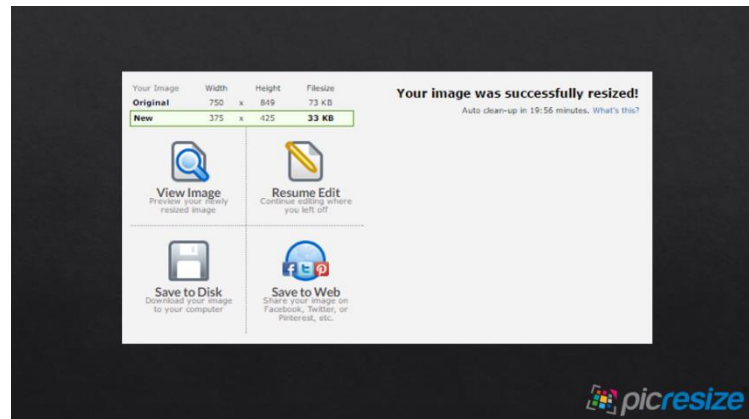

Under the **Choose Special Effect** section, we can choose to add additional effects to the picture. We just wanted to flip the image and decrease its size by 50%, so we can move on to the next step.

In the **Save As** section, you can select the format and quality you want to save your picture as. The defaults look great, so we'll just click **I'm Done, Resize My Picture!**

The image has been saved and you can choose to either view the image, edit the image, save it to your computer, or save it to the web.

And that brings us to the end of the tutorial! Mr. Binks' picture has now been rotated and resized using Picresize.
